

[Required] Please enter what you learned from today's lecture in at least 30 words.

I learned how to use the NumPy library for efficient data manipulation in Python. We covered creating 1D and 2D arrays, performing mathematical operations without for-loops using universal functions, and handling arrays of different shapes via broadcasting. I also learned how to extract specific data using slicing, basic indexing, and boolean indexing.

(Optional) Please provide specific details about what you particularly liked about today's lecture.

I really enjoyed the practical, hands-on examples. Using the real-world NOAA weather dataset to analyze daily temperatures and precipitation made it much easier to understand why NumPy is so useful in data science. It was especially cool to see how boolean indexing can be used to quickly filter out bad data, like those 9999.0 precipitation values. I also really liked the clear comparisons between standard Python lists and NumPy arrays; seeing how NumPy's universal functions let us do element-wise math without writing clunky for loops finally made the concept click for me.

(Optional) If there were any parts that were unclear or areas for improvement, please provide specific details.

The advanced indexing rules for 2D arrays, especially using functions like `np.ix_()`, were a bit tricky to grasp right away. Also, I wish we had a little more time during the hands-on coding exercises, as it felt like we were running out of time to complete them towards the end of the session.

(Optional) Regarding the instructor, please provide specific details about what you liked or disliked.

Shin was a great instructor! I really appreciated how he reassured us that it's completely fine if we don't understand everything immediately and encouraged us to take our time reviewing the notebooks this week. He was also very polite and helpful when answering our questions from the Slack channel during the exercise breaks.

(Optional) Please write down any lectures or fields you would like to attend in the future.

I'm looking forward to learning how to manipulate data with Pandas in session 3 next week.

(Optional) Please feel free to write any other comments or opinions.

Thank you for the session! The new office hours schedule is a great addition, and I might join the Saturday session since Shin is hosting it. I also appreciated the clear explanation of how the omnicampus homework grading and the outstanding student selection process work.
