

Please enter what you learned from today's lecture in at least 30 words.

Today, I learned how data science connects directly to business strategies, specifically in marketing. The lecture covered how to define a solid business issue before jumping into data solutions, which really shifted my perspective. I also learned practical frameworks such as RFM, Decile, and Churn analysis, along with the importance of A/B testing and evaluating the true impact of a campaign rather than just looking at overall numbers.

Please provide specific details about what you particularly liked about today's lecture.

I really liked the practical examples from familiar services like Netflix and Amazon. It made the concepts of recommendation engines and customer relationship management (CRM) much easier to grasp. The instructor's explanation of finding a "solid issue" that is fundamental and solvable before looking for a machine learning model to apply was a huge eye-opener for me.

If there were any parts that were unclear or areas for improvement, please provide specific details.

The section on causal inference and the removal of selection bias using regression analysis felt a bit rushed. It would be great to have a bit more time spent on the coding implementations for those advanced topics, since there were a lot of new statistical concepts to take in at once.

Regarding the instructor, please provide specific details about what you liked or disliked.

The instructor, Shoki Kamaria, was great! I really liked how he tied his own entrepreneurial experience into the lesson. His speaking pace was energetic, and he answered questions thoroughly during the Q&A session, keeping me engaged the entire time.

Please write down any lectures or fields you would like to attend in the future.

I would love to attend more sessions focusing on deep learning applications in business or maybe a deeper dive into building collaborative filtering recommendation systems from scratch.

Please feel free to write any other comments or opinions.

Thanks for the great session! I'm looking forward to applying these business frameworks to the final assignment and seeing everyone in the next lecture on SQL.
