

Please enter what you learned from today's lecture in at least 30 words

I learned the core concepts of supervised learning, including how to practically implement linear regression, logistic regression, and decision trees using the scikit-learn library in Python. I also finally understood how to prevent model overfitting using regularization methods like Lasso (L1 norm) and Ridge (L2 norm), as well as how to properly evaluate models using k-fold cross-validation and tune hyperparameters with Grid Search.

Please provide specific details about what you particularly liked about today's lecture.

I really enjoyed the interactive hands-on coding part in the Google Colab notebooks. The way the decision tree's entropy and information gain were explained visually made a highly technical concept feel very intuitive and easy to grasp.

If there were any parts that were unclear or areas for improvement, please provide specific details.

The mathematical differences between the L1 penalty in Lasso regression and the L2 penalty in Ridge regression were just a little bit hard to follow during the fast-paced video, though the contour plots definitely helped. I will probably need to review the notebook for that section again.

Regarding the instructor, please provide specific details about what you liked or disliked.

Shu Morikuni was an excellent instructor! He managed the heavy workload of the class perfectly and was super polite and thorough during the live Q&A session. I really appreciated how clearly he broke down the difference between linear regression and regression trees when a student asked about it.

Please write down any lectures or fields you would like to attend in the future.

I would love to learn more about Unsupervised Learning, especially clustering or dimensionality reduction. It would also be amazing to get a deeper introduction to Deep Learning and neural networks, since we briefly touched on where they fit into the broader AI landscape at the beginning of the lecture.

Please feel free to write any other comments or opinions.

This was a great session. I'm also really excited to hear about the upcoming Session 7 hybrid lecture at the University of the Philippines Diliman. The networking session with the free Japanese snacks sounds like an awesome opportunity.
